PROFESSIONAL SUMMARY

Data-driven graduate with an MSc in Business Analytics and a Computer Science foundation. I turn complex data into clear business decisions with hands-on experience across the full analytical pipeline. Proven in Python, SQL, Excel, and R, with real experience taking ownership of analytical problems end-to-end and seeing them through to business impact. I work fast, think commercially, and thrive in environments where curiosity, initiative, and collaboration drive results. Experienced translating analytical findings into strategic recommendations across business, operational, and client contexts.

EDUCATION

Warwick Business School | Grade: Merit

Sep 2024 - Sep 2025

M.Sc Business Analytics

Coventry, UK

- Modules in Machine Learning, Predictive Analytics, and Statistical Modelling; applied Python and R for classification, regression, A/B testing, and end-to-end analytical projects spanning data collection, strategy, and insight delivery including automated data collection and structured storage
- Structured open-ended business problems into testable hypotheses, developing evidence-based recommendations, mirroring consulting project lifecycles

SRM Institute of Science and Technology | Grade: First Class with Distinction Sep 2020 - May 2024

B.Tech Computer Science and Engineering

Chennai, India

- Relevant modules: Database Management Systems, Data Structures & Algorithms, Object-Oriented Programming, Software Engineering
- Built a strong foundation in database design, SQL, and scripting; directly applied across data pipeline, automation, and reporting projects in Python and relational database environments

PROJECTS

Job Market Analysis – End-to-End Data Pipeline (Link)

Apr-May 2026

- Designed and owned an end-to-end data pipeline from source identification and schema design through to insight delivery, pulling live data from external APIs, cleaning and structuring it, and producing actionable outputs to support strategic and operational decision-making
- Automated data collection and cleaning from multiple API sources into a normalised PostgreSQL database; maintained data integrity and built reusable, queryable structures to support ongoing analysis
- Built Power BI dashboards with DAX measures to produce clear, actionable campaign and performance insights; communicated findings clearly to non-technical audiences in plain language, structuring insights to support client-style decision-making

Business in Practice Simulation – Data-Driven Strategy (Link)

May-Aug 2025

- Analysed 28 quarters of simulated business performance data, tracking KPIs across product, investment, and marketing to inform strategic prioritisation and advisory recommendations to surface growth drivers and operational gaps; outputs used to inform strategic prioritisation across the simulation
- Applied a data-driven advisory approach to deliver measurable performance improvements: (+25%) product competitiveness, (+15%) market share, and revenue growth from \$1.5B to \$8.2B
- Approached each simulation quarter as a structured analytical problem, isolating variables, testing pricing and investment hypotheses, and iterating decisions based on data outputs rather than intuition

NHS Healthcare Assistant – AI Solution (Link)

Feb-Mar 2025

- Built a retrieval-augmented generation (RAG) assistant using Python, integrating semantic search with an LLM backend to enable accurate, context-aware responses over a large document corpus
- Engineered and iterated on prompt strategies, including step-back prompting and hybrid retrieval to improve response quality and reduce hallucinations
- Designed the end-to-end solution architecture: document chunking, vector embedding, retrieval pipeline, and LLM response generation. Identified and addressed a real-world business need through AI adoption by scoping requirements, designing the solution architecture, and iterating toward a production-ready system

Customer Behaviour Analytics – Predictive Modelling (Link)

Jan-Feb 2025

- Owned a full-cycle analytics project end-to-end scoping the business question, engineering features, evaluating models, and delivering a deployment recommendation with clear commercial rationale
- Evaluated and compared multiple ML classification models on precision, recall, and F1 metrics; selected and justified the optimal model based on the client's operational efficiency objective
- Translated technical model outputs into plain-language recommendations for business stakeholders, bridging the gap between analytical findings and strategic action

PROFESSIONAL EXPERIENCE

Warwick Conferences

Jul 2025 - Dec 2025

Conference Assistant

Coventry, UK

- Managed delivery across multiple concurrent workstreams in a fast-paced environment, demonstrating comfort with ambiguity and rapid prioritisation under pressure and resolving issues independently under time pressure
- Coordinated end-to-end operational delivery across venues by managing logistics, resource allocation, and real-time problem-solving to meet strict service-level expectations
- Collaborated across cross-functional teams (operations, logistics, and client-facing staff) to ensure on-standard delivery and resolve complex challenges in real time to ensure accurate, on-standard delivery; managed follow-ups and tracked workstreams across concurrent initiatives

TechLearn India

Jun 2024 - Sep 2024

Business Development Associate

New Delhi, India

- Analysed campaign and lead data using Python and Excel to diagnose conversion gaps, producing research-backed insights to inform targeting strategy; built structured performance summaries that directly informed senior stakeholder decisions on targeting and outreach strategy
- Worked across Business Development and sales teams to translate analytical findings into commercial recommendations; produced clear, actionable reporting and structured recommendations to support outbound strategy, gaining early exposure to client-facing commercial advisory work

SKILLS & INTERESTS

Data & Analytics: Python (pandas, automation scripting, data cleaning, web scraping), SQL (querying, aggregation, reporting), Power BI (DAX, dashboards), Excel (advanced functions, pivot tables, lookups), R (statistical testing), Tableau, Git/GitHub

Business & Collaboration: Campaign analysis, KPI and performance reporting, research synthesis, structured insight delivery, workflow automation, cross-functional collaboration with sales and operations teams, translating data and research findings into strategic recommendations and business outcome, Workshop facilitation, stakeholder presentation, and structured communication of complex findings to non-technical audiences
